

**STOP
PRESS**

DRAGON

EDITORIAL

Welcome to the third edition of Stop Press which, like its predecessors, has been sent to all those Dragon owners who returned their guarantee card. Those who have not (and there are many) are not as yet registered members of Dragon Users Club and will not be on the mailing list. If you know of anybody in this category, gently prod them to return their card so that future issues of Stop Press may be directed to them.

Though not (as yet) a fully fledged magazine, Stop Press continues, in this and future issues, to offer Dragon owners pages of program-oriented material. Programs which (a) do something interesting (b) illustrate programming techniques and (c) can be typed into Dragon in a short time, are ideal for inclusion in Stop Press. Most of the material presented falls into at least two of these categories!

Two features in the last issue have their counterparts within. Indeed we hope that Machine Code Corner and the Young User Pages will be regular features. In the belief that there are many Dragon users who will appreciate a gentle introduction to machine code, MCC (nothing to do with cricket!) continues the series by showing how the commands introduced last

time can be harnessed to perform high-speed, high-resolution graphics. As each issue is published, readers will be able to accumulate sufficient expertise to make modest use of machine code in their programs.

This does not deny the fact that Dragon's BASIC interpreter offers a rich vocabulary of commands for constructing programs, whether they be games or whatever. Two of the commands, SOUND and PLAY, are explored in the YOUNG USER PAGES which also includes a puzzle and a competition. Mr W Harold sent a contribution (Patterns) which exploits LINE. He and others will be interested in 'Take 1000 lines' where other intriguing aspects of the LINE command are investigated. Incidentally the pictures in this and the previous issue were not produced by ruler and pencil but by Dragon and a Hewlett Packard graph plotter.

Another contribution, this time from a young user in Cardiff, is a game of skill called 'Ghocons'. Full marks to Gareth Rowlands for a superbly designed game and a compact program. We look forward to many other such contributions from young and old alike.

The summer months may see a lull in programmers' activities as they take advantage of the hot

weather! But don't forget to send your entries for the 'Draw a Dragon Logo' competition (see Issue 2) by the end of July please, to the editorial address.

West Galsley Hyde
Dragon Data Ltd. Hasting Industrial Estate
Majors Park Totters West Glamorgan

As for Dragon Data, every month, hot weather or otherwise, is a month of intense activity in preparing for the launching of new ventures and the consolidation of software for Dragon 32. Stop Press will play an increasing role in providing up to date information in the months ahead.

PRICE CHANGE

On the 23 May the retail price of Dragon 32 was reduced to £175 including V.A.T. At the same time the following reductions were made: Joysticks selection 2, Graphic Animator, examples from the manual, Dragon Mountain and Dragon Selection 1 down from £7.95 to £4.95, Ghost Attack cartridge down from £24.95 to £19.95. These price adjustments are to be enhanced by the release of approximately 25 new titles over the next few weeks with many more to follow shortly thereafter. Also note that the Dragon disc drive and operating system was launched at the recent Computer Fair at Earls Court, and disc-based software will be released shortly.

MACHINE CODE CORNER

An area of programming in which the effect of machine code is particularly striking is the generation of graphics. To see the limitations of BASIC in this respect, try typing in this short module.

```

10 PMO D84 INCLUST ICRHVAL:0 COLDR:1
20 CIRCUMFERENCE
30 DENSITY
40 DETR 10--(20,30)& 0
50 FORM--(TOSTR,PSTR) 10--(1+20,30)& PSTR INCT
60 DIVIDE

```

A small circle is drawn on the left of the screen, and moved by the fastest possible locomotion, to the right. The "animation" takes about 75 seconds. Our more artistic readers may like to convert the circle into a snail! (By the way, note how small the array dimension is - 8 seems to be about 1/40th of the area of the "GET" in ASCII, which is $21 \times 23 = 483$.)

Q What, how much can this be improved by using machine code? For this one

[illegible]

This, of course, is really two shift programs. Lines 18-38 (PWR) is the machine code, and lines 41-78 (PWR2) is the action code. Even with the READ (PWR) loop the program is finished in one second. The action shift takes one fifth of a second. After the first RUN, the machine code will be in position, so RUN48 will also give you an action replay.

This is obviously faster than you will need for most purposes, and can be slowed by the use of delay loops. As with the BASIC program, every intermediate position is occupied, so a completely smooth movement is possible at any speed. The BASIC can be speeded up by leaving out some of the intermediate positions, but this results in a jerky movement.

Before we look in detail at animations of this sort, we must investigate the means by which Dragon stores graphic information. We shall concentrate on PMODE4.1. This makes use of memories 5656 to 510FF (or 5656 to 7A7E) i.e. a total of 8444 bytes. In this mode, each of the 384x160 pixels is either 'on' (green or buff) or 'off' (black). If it is 'on' it has value 1, if 'off' it has value 0. Pixels are

grouped together in sets of eight, so the top line of the screen is made up of 32 sets of 8 pixels, and each set is represented by one byte of memory. For example, if the first eight pixels are on, on, off, off, on, on, off, off, then 5555 will control the binary number 11001100 (decimal 204). This can be seen by counting

© 1999 SCREEN E POLY FORDERS IN
SOLUTION

(FOLSI) turns the whole graphics screen on i.e. it places binary 11111111, or decimal 255, in each memory, \$200 to \$7FFF.) So the rows of the screen are contained in memories \$200-\$20F, \$220-\$22F, \$240-\$24F etc.

From this observation, you may have concluded that it is easier to move things up and down than sideways - and you would be right. The byte configuration remains the same in vertical movement. So let's see if we can make the balloon go up, in a controlled sort of way.

LaTeX document is 24.52

10 PM0004.1 FOUR-BORNEO 8-COLOR 1
 20 CIRCLETTER 100 7 PALETTE 100
 30 LINETOP, 100 - 100 100.
 40 FEET LINEIN 100 - 100 100, PSCT
 50 LINEIN 100 - 100 100, PSCT 0
 60 QUANTITY 100 100 - 100 100 A 0
 70 FORM - 100 100 100 100 - 1
 80 100 100 - 0 A, PSCT NEXT
 90 100 100

Our balloon drawing is (conveniently) confined to the 18th and 19th bytes in rows 183 to 191. As with GET and PUT, it is useful to include the bottom blank row to avoid the problem of "floating out" the bottom row of the picture as it moves up. Row 183 starts at byte $1888 + 32 * 183 = 51440$, so the top of the picture is 51440² and 51476, then 51488 and 51490 etc.

The following assembly language routine will do the job:

			Machine Code
1	LDY	#HARD	10 00 1A 0F
2	LOOP1	LEAR	0 00 00 0A
3	LOOP2	LDG	00 00 00 0A
4	STG	-00 00	00 00 00 0A
5	LEAR	00 00	00 00 00 0F
6	CMPEQ	#FFFF	10 00 FF FF
7	HALT	LOOP1	20 00 00 00
8	LEAY	-00 00	00 00 00 00
9	CMPEQ	#FFFF	10 00 FF FF
10	BNE	LOOP1	20 00 00 00
11	STOP		00 00 00 00

One command you may not have met before is Load Effective Address (LEA). The statement LEAX Y may be compared with LDX Y but instead of loading into X the data released by Y, the actual address (the "value" of Y) is loaded into X. The operands for LEAX and LGAX are respectively, hex 30 and hex 31.

The numbers in the operand field, prior to the comma, in lines 4, 5 and 8 are called offsets. They cause the command to be applied to the register value + offset. In other words, line 4 stores the value of D in the memory whose address is 32 less than the value in X, line 5 increments X by 32, line 8 decrements Y by 32.

The byte following an opcode which requires a register as part of its operand is called a postbyte. We met one in the last edition (X = is represented by postbyte 30). For our present program, we need to know that X and Y are respectively 304 and 344 (with no offset) and with offsets in the range 16 to 127 or -128 to -17 the postbytes are 308 and 348 (for X and Y), followed by another byte - the offset. Negative offsets are FF = -1, FE = -2, etc.

Our BASIC program, incorporating the machine code, is:

```
10 DATA 10,10,1A,1F,2F,41,00,00,00,00,
20 30,00,20,10,00,FF,FF
30 DATA 30,FD,7F,40,00,10,00,0F,20,00,30
40 FOR = 0 TO 64 STEP 8: POCOLOR =
+ VAL(STR + 30) NEXT
50 PMODE:1 PCLR: SCREEN: 0 COLOR: 1
60 CIRCLE(128,128,7,PI*128/180
70 LINE(128,128)-(128,128) PSET
80 LINE(128,128)-(128,128) PSET,B
90 END
100 GOTO 10
```

Finally, to control the speed, we insert between lines 7 and 8 the following delay loop:

		Machine Code
	LDX	00 2F FF
LOOP:	LEAX	-1X 20 1F
	BNE	LOOP 20 FC

The postbyte of LEAX = 1X requires explanation. When the offset lies between -16 and 15, the postbyte represents the offset. For offsets of 16 to 15, postbyte = offset. For offsets of -16 to -1, postbyte = offset + 320.

The only other modification to the machine code is to the relative address of line 10: 20 FF becomes 20 00. The following program gives a controlled movement:

```
10 DATA 10,00,1A,1F,2F,41,00,00,00,00,
20 30,00,20,10,00,FF,FF
30 DATA 30,FD,7F,40,00,10,00,0F,20,00,30
40 00,10,00,0F,20,00,00
50 FOR = 0 TO 64 STEP 8: POCOLOR =
+ VAL(STR + 30) NEXT
60 PMODE:1 PCLR: SCREEN: 0 COLOR: 1
```

```
70 CIRCLE(128,128,7,PI*128/180
80 LINE(128,128)-(128,128) PSET
90 LINE(128,128)-(128,128) PSET,B
100 POCOLOR:1 POCOLOR:0:0:0:0:0:0:0:0
110 END
120 GOTO 10
```

Line 80 puts the value $5^{\circ}256 + 256 = 1025$ into memory 37FF637FFF. Smaller values give a faster movement; larger ones give a slower movement. The result - a very fine control over the speed of the balloon.

PCOPY with Care!

When we write BASIC programs on DRAGON 32 we are well protected by a sophisticated error trap which prevents us from giving commands that cannot be carried out. As an example of this, turn on your Dragon and type PMODE:4,5. The answer is PC ERROR - you can't address page 5 in PMODE:4 until you have PCLEAR'd 4 pages (the default is 4). So type PCLEAR:0 and then PMODE:4,5. This is accepted.

Now type PCLEAR:0. Back comes the answer PC ERROR. You can't PCLEAR down to 4 pages while you are addressing page 5. So type PMODE:4,1 and then PCLEAR:0. This is accepted. Most commands are protected in this way. The obvious exception is the POKG command - if you POKG addresses carelessly you are likely to lose control - by typing POKG:128,0 (128 and 127 control the cursor position).

A less obvious problem is the PCOPY command. You might expect this to be protected in the same way as PMODE and PCLEAR - but it isn't. If you type a program in, and then (without PCLEAR:0) type PCOPY 1 TO 5, your program will disappear. This is because graphics page 1 has been copied to the location which held your program. Admittedly this would be a silly thing to do but the problem is more likely to arise with programs containing statements like PCOPY 1 TO J, when it is quite easy to get the value of J wrong. So PCOPY with Care!

PATTERNS

Thanks to Mr William Harold of Cambridge for this short program. He suggests using denotation of between 3 and 8. It is a program that we have seen around in various forms - the interference patterns caused by the discrete nature of the screen pixels are generally referred to as MOIRE patterns. They will occur when lines are plotted close together.

```
10 PATTERNS
20 WILLIAM HAROLD 1983
30 CLS:INPUT ENTER; DENSITY:
40 PMODE:1 SCREEN:1 PCLR
50 FOR = 0 TO 255 STEP 5
60 LINE(0,0)-(255,100) PSET
70 IF <= 10 THEN LINE(0,100)-(255,101) PSET
80 NEXT
90 AS = INT(PI*PI*AS) THEN GOTO 10
```

PARTIAL RESTORE

When a program runs on a large number of DATA statements which may have to be accessed in any order, the most convenient method to adopt is to read the whole dataset into an array and use an indexing variable to access it. This takes up a fair amount of room in the machine, however, and an alternative is to read through the whole dataset every time access is required, using the RESTORE command to return to the beginning of the list. This is undoubtedly the most efficient method of conserving memory, but is a rather cumbersome procedure. A partial RESTORE can be achieved using the DATA memory pointer, in addresses \$33 and \$34 (decimal \$1520). By PEKKING these addresses at suitable points the first time the data are read, we can store relevant values so that the pointer can be reset to those points by POKING at a later time. The principle is illustrated by this small program.

```

10 FOR=1:GOTO1-POKE$33-POKE$34
15 READ$1:NEXT
20 CLS:PRINT$1:"WHICH STATEMENT?"
25 X=IN$(X:VAL$1)-$33:FOR$2=
  >:GOTO$2
30 X=VAL$(X:POKE$33:X:POKE$34)
35 READ$1:PRINT$1:G1
40 FOR=1:GOTO$1:NEXT:GOTO$1
45 DATA "FIRST STATEMENT"
50 DATA "SECOND STATEMENT"
55 DATA "THIRD STATEMENT"

```

JOYSTICK GAME

This game is for two players (one on each joystick). The left joystick controls the "L," and the right joystick controls the "R." The idea is to manoeuvre your letter about the screen "freezing down" as many of the numbers as possible before your opponent gets to them. You score the value of the number and your score is shown at the top of the screen. If you disappear off one edge of the screen, you will reappear immediately at the opposite edge. The numbers are 1-9 (so if you see an "8", it is just an eight and seven together). New numbers appear from time to time to keep you busy. The time limit is controlled by the 499 in line 55.

```

```

LETTER COUNT

The program counts the number of occurrences of letters in writing. Just type in the words and watch the bar chart build up. There is no `breakpoint` so type carefully. The program stops when any bar reaches the top. Then you can press `ENTER` for a table of the number of occurrences of each letter. You can press `ENTER` for the table at any time during a run but the program is then terminated.

```

1 8 IN LETTER COUNT IN PEARSON MAY 63
2 IN CLIP DIMENSION
3 IN INITIALS "ABCDEFGHIJKLMNOPQRSTUVWXYZ"
4 PRINT@CH "5-";PRINT@CH "6-";PRINT@CH "3-";
5 PRINT@CH "A1:B1";PRINT@CH "C1";PRINT@CH "C3";PRINT@CH "THAN
6
7 IF A<B THEN -52 THEN 78
8 CLIP FOR I=8 TO 100 PRINT
9   TAND@CH(1)+@CH(8) NEXT TWO
10 A=A+88:B=B+88:PRINT@CH "B"
11 L=L+88:IF L>25 THEN A=A+88:CALL J-25
12 IF A<88:IF B<88 THEN A=88:B=88
13 I=INT(RND(1)/5) IF B/A<2-1 THEN C=2201-1-1 ELSE
14   C=0
15 C=C+25:A/3-B/3-INITIALS
16 PRINT@CH "3-";PRINT "4-";PRINT@CH "C"
17 IF A<88:IF B<88 THEN A=88:B=88:PRINT@CH "A1:B1";PRINT@CH "C1";PRINT@CH "C3";PRINT@CH "THAN 40 ELSE 100

```

Another way to display the bar chart requires the following changed lines, with line 112 deleted:

```
FOR I = INTERLACKEN IF BULL(I) THEN C=MIN(I-1, MAX(C, 0))
```

TAKE 1000
LINES

The LINE command can draw lines on the screen in any direction. Unlike the DRAW command it is not limited to eight directions. The command requires the co-ordinates of the end points of

the line. It is very useful to have the high-resolution grid for reference. Once the line and points have been established the **LINE** command takes another parameter, **PSET** or **PRESET**. **PSET** draws the line in the foreground colour whereas **PRESET** draws it in the background colour. The colours can be chosen using the **COLOR** command. This has two parameters **FG**, the foreground colour and **BG**, the background. The colours must be chosen with respect to the **SCREEN** in use. If the **COLOR** command is omitted the foreground colour will be the highest number available on that screen and the background the lowest. There is another form of the command **LINE(X0,Y0)** which draws a line between the new point and the last one used in a **LINE** command. If the first **LINE** command in the program is of this form, a line is drawn from the centre of the screen to the point. Using **PRESET**, the first time round might be one way of ensuring this line. In addition to **PSET** and **PRESET** there is another parameter by adding **B** to the **LINE** command a box is drawn instead of the line, the diagonal of the box being the original line. If **BF** is added the box is filled in the background colour.

The following program shows a triangle subroutine in use. The 36,000 bytes of the three points are chosen at random and the colours are rotated. To colour the triangles is, a point inside the triangle must be found for the PLOT command. In this case the points of the triangle are chosen at random. So which point has made the triangle. The point whose co-ordinates are the average of the X values, $(XA + XB + XC)/3$ and the average of the Y values $(YA + YB + YC)/3$ will certainly be inside.

```

1 REM THROUGHS IN PLASCON MAY BE
2 REM PRESSED SCREEN IN FOLDS
3 REM C=3 TO 4 COLOR C=1
4 REM XX=PIVOTING XB=PIVOTING XC=PIVOTING
5 REM YX=PIVOTING YB=PIVOTING YC=PIVOTING
6 REM GOSUB=PIVOTING XB=PIVOTING
7 REM XX=XB+PIVOTING C NEXT
8 REM GOTO 10
9 REM LINCOLN YAL=DO PIVOTING
10 REM LINCOLN XC YC PIVOT LINCOLN (XX, YAL)
11 REM RETURN

```

Writing a lot of LINC commands can be tedious. One way out is to write the command as a subroutine and change the values of the end points either by defining them directly in the program e.g. `XA=100`, or, by reading them from DATA statements.

The following demonstration program shows how DATA statements can be used with a LINE subroutine to make a picture out of filled boxes. The COLOR command allows the boxes to be different colours. Only when a variable is changed does it's new value have to be READ. The program draws ten boxes and then RUN should reveal one very familiar 'box'.

```

1 REM BOX IN PEARSON MAY 82
2 REM PLOT BOX SCREEN 1 PLOT CT=1 CO=1 CO=1
3 DEF FN(CI)=1-CO+CO*CI-1-CO+CO*CI
4 FOR I=1 TO 10 READ XA YA XB YB C:GOSUB 1000 NEXT
5 FOR I=1 TO 2 READ YA YB C:GOSUB 1000 NEXT
6 READ XA XB GOSUB 1000
7 FOR I=1 TO 2 READ YA YB C:GOSUB 1000

```

```

100 GOTO 120
110 COLOR C:LINE(XA,YA)-(XB,YB)PSET BF:RETURN
120 DATA 20 60 100 100 0 60 100 120
    1 60 100 100 100 1
130 DATA 100 100 120 100 7 100 60 100 7
140 DATA 70 60 60 100 100 70 70 60 70

```

Another way to change the co-ordinates is in a FOR...NEXT loop. This works well when the co-ordinates change in a regular way. The next few lines use this method to shade the top and sides of the 'box'. Five LINE commands, together with PRINT could have been used but by drawing lines very close together in alternating colours, new colours, not readily available on Dragon, appear. These are created as gaps of the way the eye combines colour and the Dragon sets points. The colours are defined in line 10 so that you can experiment with different ones. You can change the loop length in lines 70 and 100 and try altering the SCREEN

Add these lines to the previous program

```

10 FOR I=1 TO 20 STEP 2 COLOR CO:LINE(100-I,100-I) TO (100-I) TO (0)PSET
11 CO=FN(CO)NEXT
12 FOR I=1 TO 20 COLOR CO:LINE(100-I,100-I) TO (100-I,0)PSET
13 CO=FN(CO)NEXT

```

There is another sort of shading available with a LINE command. This involves joining points along two lines. Each line is divided into many equal intervals and the points are joined so in jag and silk designs. The effect is of a moulded shape. The following program shows this beautifully.

```

1 REM CONCORD: A MYSTERY
2 REM PLOT 1 COLOUR 1 SCREEN 1 PLOT
3 FOR J=1 TO 3
4 READ A,B,C,D AA,BB CC,DD FOR I=0 TO N
5 Z=BN(X)=A+BC-A/P Z=F+D-C-B/P Z=AA+CC-AA/P Z=N+BB+DD-BB/P
6 LINE(X)-(A+N)PSET NEXT J
7 GOTO 30
8 DATA 25 12 12 100 100 100 100 100
9 DATA 10 12 12 100 100 100 100 100
10 DATA 25 12 100 100 100 100 100 100

```

YOUNG USER PAGES

NINE-NINE-NINE

Does anyone know what sound a dragon makes? Gops bark, coars moo, and E.T. says 'goshen', but what do dragons do? The sort of dragons that live in lairs and terrance villages by burning down houses whenever they cough that is. Of course the sort that live in houses near the television only terrify the old folks (Over 38's). We know those Dragons sing, make crunch noises and buffet whiskers. But you haven't really got a well-trained Dragon until it makes noises that you want it to make. You can use the SOUND command to tell your Dragon to make noises. Type in SOUND 89 16 followed by ENTER. You should hear a middle C lasting about a second. If you don't then try turning up the sound or adjusting the tuning on your TV.

Try using different numbers. The first determines the pitch and can be from 1 to 255. The second number controls the length of the note and must be greater than 0.

If you want to hear all possible pitches you can put the SOUND command into a loop. Going up:-

```
10 FOR P=1 TO 255
20 SOUND P 1
30 NEXT
RUN
```

The loop takes P through all the values from 1 to 255 including one at a time. We can change the loop to take P through all values from 255 to 1 decreasing 1 at a time. Just change line 10. Coming down:-

```
10 FOR P= 255 TO 1 STEP -1
```

Perhaps you want to play the same note over and over again. Try

```
10 FOR J= 1 TO 5
20 SOUND 129 5
30 NEXT
```

This loop takes J through values 1 to 5 but J isn't mentioned inside the loop so the program just does the same thing five times. How dull! Let's change line 20 to

```
20 SOUND 129 SOUND 129
```

Run this. Does it remind you of anything? Now add these lines to give you the familiar drop in pitch

```
40 SOUND 129 SOUND 129
50 FOR J=1 TO 3
60 SOUND 129 SOUND 129
70 NEXT
```

You can make very small changes in pitch using the SOUND command, but you need a very good ear to decide which number gives which note. However with the PLAY command you use letters CDEFGAB for a scale together with sharps (#) and flats (b), or alternatively, numbers separated by some colons 1/2/3/4... 11/12 to play successive semitones. This is the way to make your Dragon tuneful. There are lots of instructions available and page 113 of the Dragon Primer lists them all.

To make the first sound using the PLAY command I decided to use B and B flat above middle C (B3 played very rapidly (1250) to give the chord effect. I played them 15 times to get the right length of note. For the lower note I used F and F#, but you can change the notes to suit yourself. I wanted the area to start quietly and come nearer so the volume had to be increased. I could write lots of strings: PLAY"v1" + ".PLAY" v2" + ... and so on. That's tedious so the changing numbers are in a loop. For example lines 10, 20 and 30 in the following program are

```
10 FOR L=1 TO 10
20 PLAY "v" + STR$(L)
30 NEXT L
```

(L for loudness)

When you use several loops in a program it's wise to make which variable you want when you end the loop with NEXT. Hence NEXT L.

Here is the program for a slow getting nearer

```
10 FOR L=1 TO 10
20 FOR I=1 TO 10
30 PLAY "v" + STR$(I)
40 PLAY 1250 COMB - '
50 NEXT I
60 FOR I=1 TO 10
70 PLAY "v"
80 NEXT I
90 NEXT L
```

If you want to carry on and make the screen go past use

IN FOR 1=28 TO 1 STEP -1

and a drop in price say A and B flat with F and E

Now a challenge! Can your Dragon ring like a telephone? If it can send your program to us and we'll reward the best entry with free Dragon software! For details, see Young Users Competition.

Now follow a tiny program to develop word sounds by changing one line

```
10 P0="TUMBRICA"
20 PLAY P0 GO TO 20
```

You must use the BREAK key to stop this program. Here are some other ideas for line 10

```
10 P0="TUM ABSCA"
10 P0="TUM ABMPT"
10 P0="TUM0 SABBPT"
10 P0="TUM SABBPT"
10 P0="TUM00 ABMPT"
10 P0="TUM00000PSP00000P" (spaceless) sound
10 P0="TUM0000000P00000" (noise running fast)
10 P0="TUM0000000P00000" (lower noise)
10 P0="TUM0000000P00000" (loud noise)
10 P0="TUM0000" (spaceless) hi sound
```

So PLAY AWAY!

WIN 4 SOFTWARE CASSETTES (COMPETITION)

If you are twelve years old or under and would like to win some Dragon Software then devise a program on your Dragon 32 that uses the computer's SOUND or PLAY commands to mimic a telephone ringing. The program should not be more than twenty lines long.

The young programmer judged to have devised the best entry will win 4 cassettes of their choice from the software listed on the back page and some posters illustrating some popular Dragon games.

Send your entries to The Editor of the Newsletter at Dragon Data by 31st August 1983. The additional decision is final.

The editor, The Newsletter, c/o Dragon Data Ltd, Sailing Industrial Estate, Margate, Port Talbot, West Glamorgan

DRAGON PUZZLE 2

This program plays a tune but first you must put the lines in the correct order. On the right are clues to the missing line numbers. Put the answers in the spaces left for them and type RUN. I'm sure you will recognise the tune.

1 DRAGON PUZZLE 1

**NEW**

RELEASES from the Dragon's Lair

Here are 34 new titles in the official Dragon Data Software range that should be appearing in the shops about now. Watch out for further Software news in STOP PRESS.

M30526 STALAO ENO

No joystick: Two adventure games: in staling your goal is to escape alive from a prisoner of war camp before it is bombed. In Eno, you are searching for the money left by your late aunt. To prove that you deserve the fortune that has been left to you, your aunt has hidden the cash.

M30524 MANSION OF DOOM

No joystick: Mansion of doom is an adventure game in which you have been chosen to rescue the crown princess Marietta with the townspeople of her village in Transylvania. You must rescue the princess from the mysterious Count van Sternell. His mansion, on the edge of the village, is riddled with traps. The count himself has never been seen in daylight.

M30522 POSEIDON ADVENTURE

No joystick: Poseidon Adventure is an adventure game in which you are aboard the luxury liner SS Poseidon. A huge undersea earthquake has caused a tidal wave which has capsized the ship. It is floating, bottom up on the surface and taking on water. Your goal is simply to get out alive.

M30533 DREAMBUG

No joystick: Dreambug is a monitor (debugger) and disassembler for the Dragon 32 which is designed to be used in conjunction with green-joystick-assembler cassette for the Dragon 32.

M30523 FINAL COUNTDOWN

No joystick: Final Countdown is an adventure game in which your mission is to prevent a nuclear missile from being launched and starting world war III. You begin the game outside a missile base which has been evacuated after a berserk General has started the countdown on a missile.

M30530 TIMSCRIPT

No joystick: Printer required. A speed writer which will enable you to use your Dragon to produce continuous text, such as business letters, quickly and easily. Timscript allows frequently used words and phrases to be replaced by two letter codes, considerably reducing the number of keystrokes required. The codes are automatically expanded when they are typed.

L30518 DREAM

No joystick: A professional quality screen editor and assembler for use in the production of assembly language programs and subroutines.

I30501 ALLORIAN EDITOR/ASSEMBLER

No joystick: A screen editor, assembler, disassembler and monitor together on a cartridge. The package will enable the user to create and debug assembly language programs or assembly language subroutines to be called from within basic programs.

L30830 PIXEL EDITOR

No joystick. This program will enable quick and easy creation and editing of graphics shapes. Each individual pixel can be accessed in order to produce detailed pictures and character sets.

L30831 HIDE AND SEEK

No joystick. Hide and seek is a program designed by experts to test short term memory and develop early reading skills. The program has a range of difficulty levels to suit children between the ages of four and eleven, and as well as being educational, is a program which children will enjoy using.

L30832 NUMBER PUZZLER

No joystick. Number puzzler is a program designed by experts to develop children's powers of mental arithmetic. The program has a range of difficulty levels to suit children between the ages of four and eleven and, as well as being educational, is a program which children will enjoy.

L30833 NUMBER GULPER

Joystick optional. As for number puzzler.

M30834 CIRCUS ADVENTURE

No joystick. Circus adventure is an adventure game designed especially for children between the ages of 4 and 8. The program incorporates a number of user inputs to encourage keyboard familiarity and presents the child with a series of choices to be made to encourage decision making skills. The program is designed to be non-frustrating and children will enjoy using it.

M30835 SCHOOL MAZE

No joystick. As for circus adventure.

M30836 DRAGON SELECTION 3

Joystick required for alone. Dragon selection 3 is a collection of four games programs - Maze, Detective, Alone, Hangman.

M30837 DRAGON SELECTION 4

No joystick. Dragon selection 4 is a collection of three party games for children: Password, Lucky Dip, Composer.

M30838 RAIL RUNNER

No joystick. A fast moving video game, rail runner is a race against time to cross a series of tracks, avoiding trains and hurdles to rescue Herman Hobb.

M30839 EL DIABLO

No joystick. El Diablo is an adult adventure game. You are wandering in the desert trying to regain your lost magic powers before confronting El Diablero.

M30840 STORM ARROWS

Joystick required. Storm arrows is a fast moving, multi-screen maze game. Your task is to defend yourself against hostile arrows while maintaining your energy supply.

M30841 GALAX ATTACK

Joystick required. As wave after wave of enemy ships attack, you must defend your ground base against them. The enemy craft fly in conway formation but they will disband in order to attack.

M30842 SHARK TREASURE

Joystick required. You have discovered the lost wreck of a ship which sank many years ago with a cargo of gold bars. The only thing between you and a fortune is a swarm of huge sharks. Shark treasure is graphic video game.

M30843 DOODLE BUG

Joystick required. Doodle bug is a colourful, fast action maze game. An interesting number of enemies have to be avoided together with a number of dangerous obstacles.

M30844 SHUTTLEZAP

Joystick required. Orbiting the earth your task is to grab as many satellites as you can before landing safely back at base. This program has great graphics and what's more - it takes to you.

M30845 WHIRLYBIRD RUN

Joystick required. Whirlybird run is a fast moving arcade type game, with multiple screens, different types of attacker and a maze to be negotiated in the final stages.

DRAGON SOFTWARE

SOFTWARE AVAILABLE FOR THE DRAGON 32

N 3000 DRAGON SELECTION ONE	Four games for the younger user. Written in BASIC, they can be listed and edited.	M 3070 EL DORADO	An adventure game set in the desert.
N 3001 DRAGON SELECTION TWO	Collection of utilities. Create your own data base, write your own tunes.	J 3010 BERSERK	A challenging shooting game based on the popular arcade game, one or two players. A high resolution game in black and white. Joysticks required.
M 3000 QUEST	Adventure game in medieval setting. Defeat Moorlock, master of the dark castle.	J 3001 METEORFIRE	Guide your ship through treacherous asteroid belt. A game requiring skill, fast reactions and concentration. A high resolution game in black and white. Joysticks optional.
M 3000 MADNESS AND THE MINOTAUR	A realistic adult adventure game.	J 3012 COSMIC INVADERS	Dragon version of the famous arcade game.
M 3004 PERSONAL FINANCE	Keep track of family finances.	J 3013 GHOST ATTACK	Maze game for one player. Joysticks required.
N 3006 GRAPHIC ANIMATOR	Create simple cartoons on the screen and animate them by flipping through the pages. Joysticks required.	J 3014 CAVE HUNTER	Descend into the maze of caves in search of gold. Joysticks required.
M 3008 COMPUTAVOICE	Your Dragon will talk with you via its synthesiser.	J 3010 STARSHIP CRAMDOWN	Protect your planet from the attacks of the Cretabators. High quality arcade game with superb graphics and sound. Joysticks required.
N 3007 EXAMPLES FROM THE MANUAL	30 examples from the programming manual.	J 3010 ASTROBLAST	Defend your ship against waves of attackers. A high resolution game, reminiscent of Asteroids. Joysticks required.
M 3009 CAUSTIC ISLAND	An adventure game. Return the hidden treasure to its rightful place.	I 3009 CHIEF	Nine levels of play from beginner to master.
M 3008 BLACK SANCTUM	An adventure game. Overcome the forces of black magic.	J 3011 SAIL RUNNER	Move Bill Shellfishman across the tides, avoiding traps, to rescue Harriet Hobo.
M 3012 TYPING TUTOR	Improve your speed and accuracy.		
N 3010 DRAGON MOUNTAIN	An adventure game. Defeat the guardians of the treasure hidden in the mountain.		
M 3011 FLAG	Place your opponent through a constantly changing maze to the goal flag. Joysticks required.
